

FR Flange

EXHAUSTO
FOR A BETTER FLOW

FR - Product information

Description

EXHAUSTO flange type FR is used when installing an EXHAUSTO chimney fan on top of a twin-walled metal chimney. The flanges are made of stainless steel. The spigot of the flange FR is inserted into the flue. The glass fibre mat is placed on top of the flange with the aluminium foil facing upwards. A hole is cut corresponding to the ID of the flue/spigot. The fan and flange assembly is located on top of the chimney. Standard mounting is with anti-vibration bolts, these are supplied with the flange.

When using the anti-vibration bolts, the corners of the glass fibre mat must be cut off. The outer diameter of the spigot is 3 mm smaller than the inner diameter of the flue, e.g. flange FR1-200 has a 197 mm spigot, and hence fits a chimney ID of 200 mm.

The range offers alternatives to suit any fan model and most flue IDs.

Chimney Fan	Flange (mm)	Chimney ID									
		125	150	175	200	225	250	300	350	400	450
RSV009/160	240 x 240	FR1-125	FR1-150	FR1-175	FR1-200
